FinTrack- A Personal Finance Tracker Website

A complete solution for managing your money

Project Overview

A simple and user-friendly web application that helps people easily track and manage their personal finances. It is built using the Python, which includes Pandas, Plotly for the database, Open Foundation technologies like Python Streamlit for the backend, for creating the user interface.

Core features include expense and income logging, budget setting, real-time data visualization, and financial insights. The platform is designed to be secure, responsive, and user-friendly across all devices.

Project Objective

Easy Transaction Recording

Enable users to quickly and accurately record their daily financial transactions with an intuitive interface

Clear Financial Insights

Provide interactive charts and comprehensive dashboards that transform raw data into actionable insights

Budget Management

Help users set realistic budgets, monitor spending habits, and receive alerts when approaching limits

Security & Experience

Ensure robust data security and deliver a smooth, seamless user experience powered by Python technologies

Scope of the Project

The application encompasses all essential features for comprehensive personal finance management

User Authentication

Secure registration, login, and profile management with JWT tokens

Transaction Operations

Full CRUD capabilities for income and expense entries with categorization

Data Visualization

Real-time interactive charts including pie charts and bar graphs

Smart Alerts

Budget notifications and comprehensive financial summaries

Responsive Design

Optimized experience for both desktop and mobile devices

Hardware Requirements

Development Environment

Standard PC or Mac with minimum 8GB RAM, internet access, and modern web browser for coding and testing

Deployment Platform

Streamlit Cloud or hosting platform such as AWS, Heroku, or DigitalOcean for production deployment

User Devices

Any modern desktop, tablet, or mobile device with a web browser and internet connectivity for accessing the application

Software Requirements

Python

Runtime environment and package manager for backend development and dependency management

WebServer

Minimal web framework for Server handling backend routing, middleware, and RESTful API endpoints

SQLite

SQLite cloud database or local installation for storing user and transaction data

Development Tools

VS Code for coding, Postman for API testing, Git for version control, and npm scripts for automation

Streamlit

Frontend library for building dynamic, component-based user interfaces with modern Layout.

Project Timeline

An 8-week development roadmap from concept to deployment

SUCCESS ✓

Project Summary

Full-Stack Achievement

Successfully built a complete application for personal finance tracking

Security & Design

Delivered a secure, responsive, and intuitive user interface across all devices

Real-Time Insights

Enabled users to manage finances with live insights and intelligent budget controls

Future Ready

Platform ready for enhancements like AI-driven advice or native mobile applications

Track, Analyze, and Control Your Finances with FinTrack

Experience the power of AI Driven FinTrack for managing your financial future
